# Class 1: logistics and central concepts in Statistics

#### Overview

#### Course overview

Syllabus and logistics

What is Statistics?

Samples and Populations: shadows and Truth

Structured data: quantitative and categorical variables

Installing R Studio (see class video)

# Course overview and logistics

# My information

Email: ethan.meyers@yale.edu

Visiting Associate Professor at Yale

Assistant Professor of Statistics Hampshire College

Research Fellow at the Center for Brains, Minds and Machines at MIT

Research: Machine learning methods to analyze neural data

# Teaching Assistants

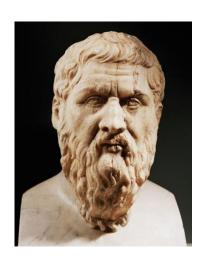

#### Undergraduate Learning Assistants

- Maria Eduarda Santana: <u>mariaeduarda.santana@yale.edu</u>
- Karen Tai: <u>karen.tai@yale.edu</u>
- Darren Lin: darren.lin@yale.edu
- Mercy Idindili: <a href="mailto:mercy.idindili@yale.edu">mercy.idindili@yale.edu</a>
- Lu Zheng: <u>lu.zheng@yale.edu</u>

# Learning goals

1. Understand the key concepts in Statistics

- 2. To learn how to analyze real data
  - We will use the R programming language
    - Do not fear, this will make our life easier!

#### Course format

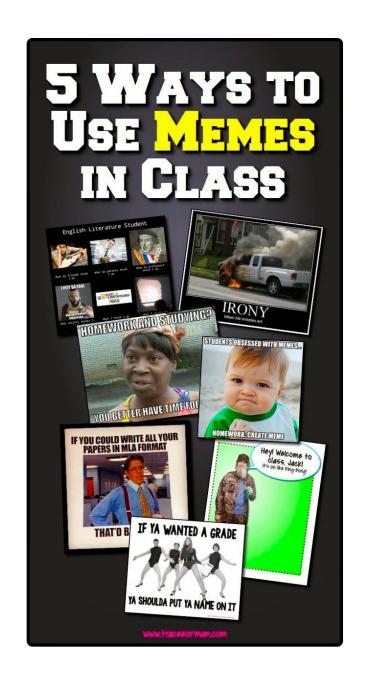

Pre-recorded videos will be available prior to the regularly scheduled class time

• Ideally several days in advance

The regularly scheduled class time (9-10:15am Tues/Thurs) will be an opportunity to:

- Ask questions
- Review material
- Practice additional exercises and analyses

All homework assignments will be available by class time on Tuesdays and will be due at 11:30pm on Sundays

#### Plan for the semester

#### Exploring data/descriptive statistics (weeks 1-4)

Sampling, categorical and quantitative data

Measures of central tendency and spread

• Mean, median, standard deviation

Relationships between variables

Correlation and regression

#### Plan for the semester

#### **Inferential Statistics**

Sampling distributions

Confidence intervals

The bootstrap

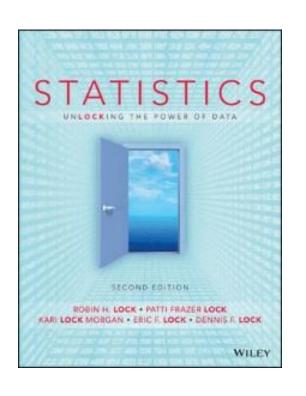

Hypothesis tests using randomization methods

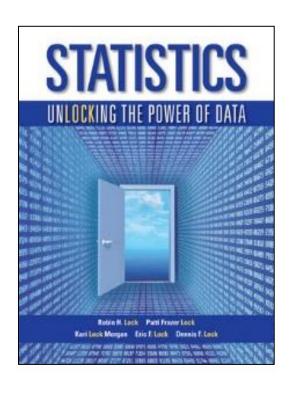

Permutation tests

Hypothesis tests using parametric methods

• T-tests, ANOVA, etc.

### Textbook: Lock5

Additional reading and other resources will be posted to Canvas: https://yale.instructure.com/courses/65108

# Assignments and grades

- 1. Homework problem sets (54%)
  - Exploring concepts and analyzing data using R
  - Weekly: 10 in total

#### Homework policies

- You may discuss questions with other but the work you turn in must be your own
- Worksheets assigned on Tuesdays and are due at 11:30pm on Sundays
- Late worksheets (90%) credit if turned in by 11:30pm on Monday
  - For any other extensions a Deans Excuse is needed
- Lowest scoring worksheet will be dropped

# Assignments and grades

#### 2. Final project (8%)

 Similar in length to a homework assignment, but you will analyze data of your own choosing based on your interests using methods discussed in the class

#### 3. Exams (33% total)

- Midterm: March 25<sup>th</sup> during the regular class time (15%)
- Final: May 16<sup>th</sup> at 2pm (18%)

#### 4. Participation (5%)

Active asking and answering questions on Ed Discussions

## **Policies**

**Accommodation**: please let me know if you have accommodations for homework and/or exams

#### Academic dishonesty: Don't do it!

- You can work with others on the homework but the work you turn in needs to be your own
  - i.e., you need to understand the concepts and be able to produce the results yourself
- You can't talk with others on exam, etc.

# Examples of questions/analyses we will look at...

**Z-scores**: What is most impressive about LeBron James?

**Sampling**: How can insights from the Swedish chef help us avoid bias?

**Confidence intervals**: How can we pick ourselves up from the bootstrap to estimate a plausible range of values?

Randomization tests: Is it possible to smell whether someone has Parkinson's disease?

# A typical homework assignment

#### Part 2: Practicing R

Please answer the following questions to get practice using a few basic R functions. Make sure you have a clear understanding of how to use this code since future class work will build on this knowledge.

Exercise 2.1: (4 points) Let's get started by using R as a calculator. Use R to calculate the square root of 21.32, and then divide this number by 2.71.

```
# delete the below lines and replace with the correct math (2 # + 3) ~2
```

Exercise 2.2: (6 points) Create a vector with the numbers 7, 15, 18, 3, 5, 12, and 20 in it and assign this vector to an object called my\_vec. Multiply this vector by 2 and assign it to the object my\_vec2. Finally, use the sum() function to sum all the values in the vector my\_vec2.

# Class survey

In order to get to know you and to adjust the class to veryone's interests, please fill out the class survey on canvas

Under the Quizzes link on the left

Any questions about the class logistics???

Ask on Ed Discussions!

# What is Statistics? (capital S)

"Statistics is a way of reasoning, along with a collection of tools and methods, designed to help us understand the world" (De Veaux et al. 2006, p. 2)

"Statistics is a body of methods for making <u>wise</u> decisions in the face of uncertainty" (Wallis & Roberts 1962, p. 11)

Fienberg, S. (2014). What is Statistics? The *Annual Review of Statistics and Its Application*, 1:1-9

# 37, 264, 599), (137, 266, 594), (137, 298, 564) 38, 294, 567), (138, 297, 564), (139, 274, 566), (139, 276, 584) 43 \$ tis tic \$ 43 \$ tis tic \$ 55 \$ 55, 372, 469), (158, 379, 462), (159, 362, 478), (159, 368, 472) 66 [stuh-tis-tiks], (1,7,38, 597)

1. the only science where two recognized experts, using exactly the same set of data, may come to completely opposite conclusions.

# My thoughts

#### Statistics is a way to use data to answer questions:

- Often we use a small amount of data to answer questions about a larger underlying phenomenon
- We want to know the Truth, and not be fooled by randomness
  - Quantify uncertainty

#### It's part of an argument

- Don't blindly trust statistical tests, think about the results!
  - Do you really believe them?
- Be your own worst critic and try to prove yourself wrong

1. the only science where two recognized experts, using exactly the same set of data, may come to completely opposite conclusions.

# A warning about terminology

"Boy, those French: They have a different word for everything!"

- Steve Martin

Boy, those Statisticians: They use common words to mean something different!

Bias, confidence, significance

# Central concepts in Statistics

#### Yale Poorvu Center for Teaching and Learning

#### **Top Ten Teaching Strategies**

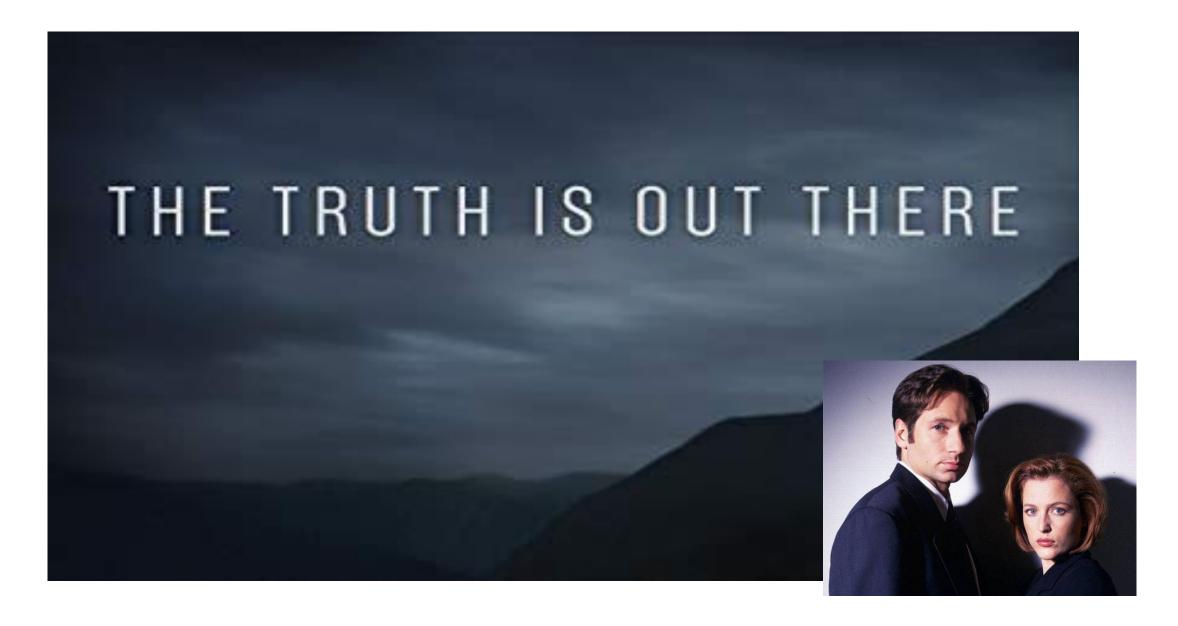

- 1. Learn every student's name.
- 2. Create course objectives and classroom policies as a way to begin establishing community, and review them at midterm or more, as needed. In addition, discuss each session's learning objectives in class, with each meeting. Being explicit about your pedagogical techniques helps students see the design behind their learning.
- 3. Identify and utilize your pedagogical strengths and develop your teaching weaknesses.
- 4. From the beginning, practice strictness as a matter of policy and grace as a matter of humanity. Be yourself let students see who you are.
- 5. Create classroom spaces in which everyone feels encouraged to participate. Be willing to learn about and use inclusive teaching practices in order to make belonging a reality.
- 6. Punctuate or inform the journey through course content with "big questions" and "big issues" that grapple with truth and the nature of the absolute.
- Assign frequent, lower stakes assignments as a way to help students measure their learning progress. Give meaningful feedback on each assignment.
- 8. Use a midterm course evaluation to garner feedback and improve the course.
- Be willing to put a lesson plan aside if students really want or need to talk about something, like a campus incident or national event.
- 10. Remember first, last, and in between that you are teaching people, not the subject. Take every opportunity to show students you care about them as people and about their learning.

#### Center for Teaching and Learning tips

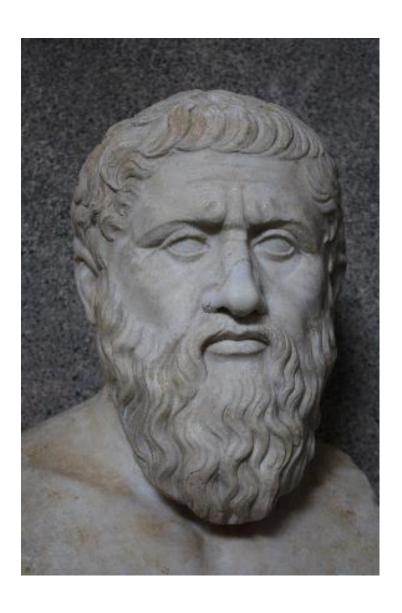

Tip 1: Learn every student's name

**Tip 6:** Punctuate or inform the journey through the course content with "big questions" and "big issues" that grapple with truth and the nature of the absolute

# Central concepts in Statistics

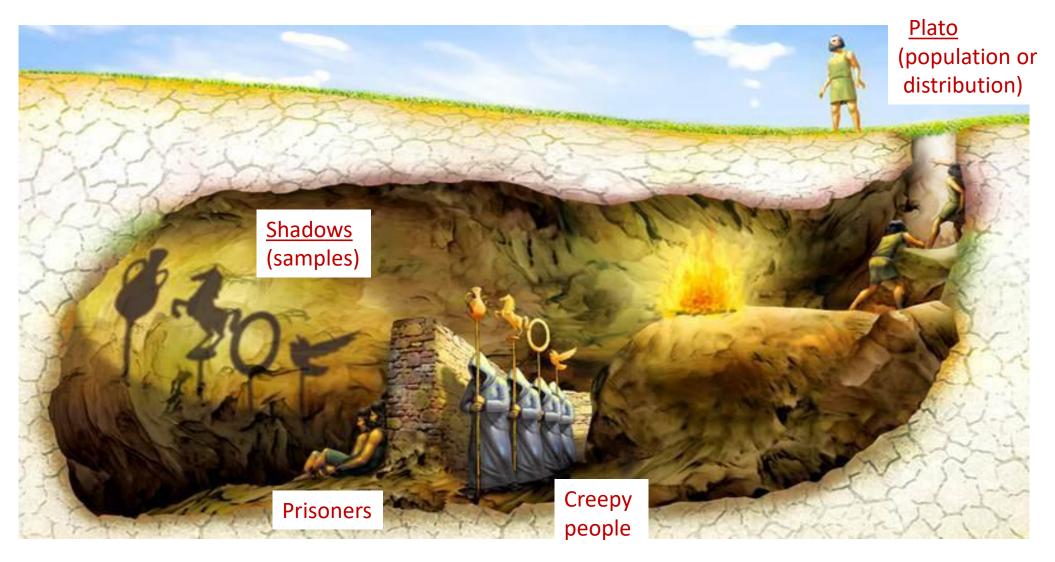

#### The Truth!

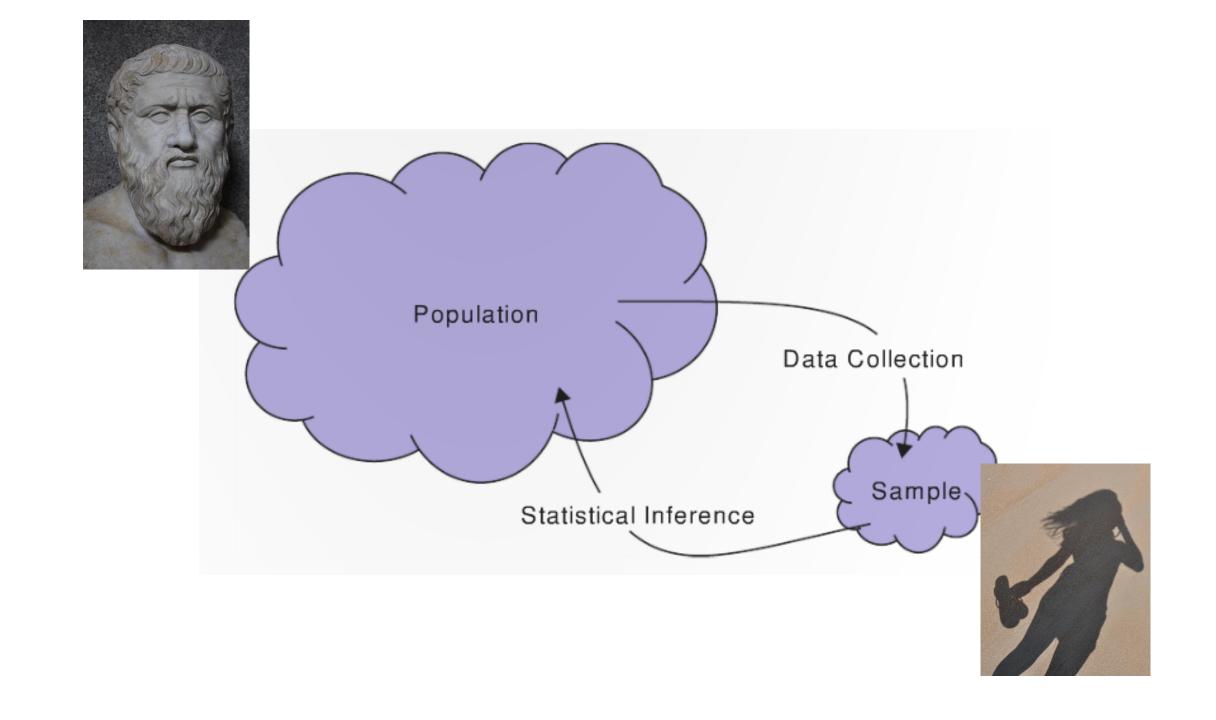

If we could see all the (infinite) data, we would know the Truth®!

Alas, we can only see a small subset of the data (a sample) so we merely see a shadow of the truth

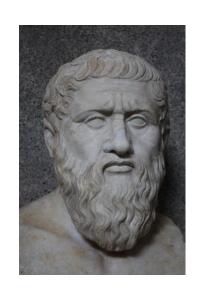

# Plato's cave

# Sample from a Population

**Population**: all individuals/objects of interest

Sample: A subset of the population

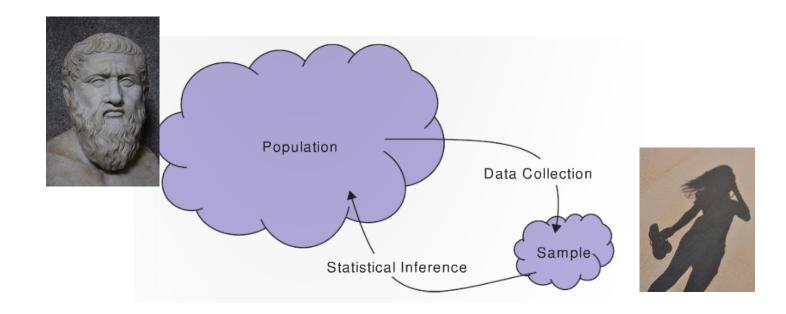

# Descriptive and inferential statistics

**Descriptive Statistics**: describe the sample of data we have

• i.e., describe the shadows

**Inferential Statistics**: use the sample to make claims about properties of the population/process

• i.e., try to use the data to get at the truth

# Can you handle the Truth?

If not, perhaps you should not take this class You've been warned...

# Structured data: exploring the shadows

# An Example Dataset (Shadows)

#### Variables

•							
	Year	Smoke	Award	HigherSAT	Exercise	TV	Height

# Summary of concepts

- 1. Population: all individuals/objects of interest (Truth)
- 2. Sample: A subset of the population (shadows)
- **3. Statistical inference**: Making judgments about the population using data from the sample

#### 4. Structured data has

- Cases/observational units: rows in a data set
- Variables: columns in a data set

#### 5. Variables can be

- Categorical: fall into discrete categories
- Quantitative: are numbers
